Directions to WVU Center for Neuroscience
Erma Byrd Biomedical Research Center

Exit the PRT and cross the footbridge. In front of you will be a large parking lot (near the Cancer Center). There will be a covered walkway on your left; follow this through the parking lot. Enter the building through the main doors, and you will be in a gathering hall, with a coffee shop (Cavanaugh’s) and an open staircase in front of you (depending on which doors you entered, you may have to walk down a long open hallway – the gathering hall will be on your right).

Take the open staircase to the next level, and cross into the older section of the building. In front of you will be elevators; to the left of the elevators will be a long hallway. Take this hallway all the way to the end and go through the double-doors, which will put you on the second floor of the new Erma Byrd Biomedical Research Center building. Take the elevators (not the service elevator, which is the first one you will see) or the stairs up one floor. You will now be on the third floor of the Biomedical Research Center, outside the Center for Neuroscience.

The conference room (301) is directly across from the elevators. Dr. Spirou’s office is room 305, just through the double glass doors. Erica Stewart’s and Matthew Scott’s office is room 306, right next to Dr. Spirou’s office through the double glass doors.

If you need assistance in finding the Center for Neuroscience, please call Erica Stewart at 304.293.6289, or Matthew Scott at 304.293.2930.
