

Greg del Zoppo, M.D.

Professor of Medicine, Division of Hematology
Adjunct Professor of Neurology
University of Washington School of Medicine

Dr. del Zoppo is professor of medicine in hematology, an adjunct professor of neurology and an expert in clinical hemostasis and thrombosis. He conducts research in problems of the vascular biology of the central nervous system, focusing on how thrombi produce ischemic strokes and how hemorrhaging damages the brain. He has substantially contributed to the acute treatment of thrombotic stroke and to current treatment approaches to this disease.

Dr. del Zoppo received his bachelor's degree with honors in chemistry from the University of Washington and pursued post-graduate training at the California Institute of Technology. He returned to the University of Washington where he received his M.D. in the physician-scientist pathway. Dr. del Zoppo trained in categorical internal medicine and hematology. He spent two periods at The National Hospital's Institute of Neurology at Queen Square in London. Following fellowships in hematology at the Oregon Health and Science University and the Scripps Clinic and Research Foundation, he joined the faculty in the Department of Molecular and Experimental Medicine and the Department of Vascular Biology at The Scripps Research Institute in both fundamental and clinical research. Additionally, Dr. del Zoppo cared for patients at the Scripps Clinic. In mid-2007, Dr. del Zoppo relocated to the University of Washington to further pursue research activities and clinical care.

He is a Fellow of the American Heart Association and American Stroke Association, a member of the International Society of Thrombosis and Hemostasis and a number of other societies. Dr. del Zoppo has received the prestigious Javits Neuroscience Investigator Award of the NINDS/NIH, election to the Association of American Physicians, the American Neurological Association and the Japanese Society of Neurology (Honorary). He has been the principal investigator of a number of investigator-initiated acute care trials of ischemic stroke.
