

Intermodal Facility Construction Update:

Preparations for the beginning construction of the Intermodal Facility are underway. Part of these preparations will result in closing the existing stairs and walkways leading from area 81 to the Health Science Center via the PRT Station. The existing stairs will be closed off October 31, 2008. Temporary walkways and stairs will open at that time.

The new wooden steps will have handrails on both sides as well and in the center. The wood is pressure treated and has slip-resistant tread. Additionally, there will be temporary lighting provided for added safety. The shuttle vans/buses will continue to remain in operation and provide transport to the HSC, as usual.

Completion of the Intermodal Facility is scheduled for October, 2009. Upon completion, the facility will provide internal stairs and elevators going directly to the PRT station. At the PRT station there will be a covered walkway leading into the Health Sciences Center.
