Returning Veterans in the U.S.

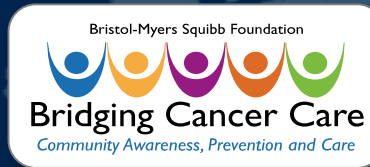

Lung Cancer in the U.S.

Specialty Care in the U.S.

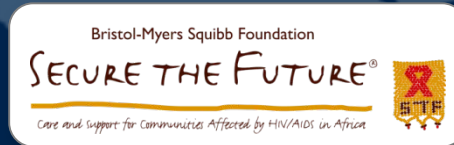

Cancer in Central and Eastern Europe

Hepatitis in China & India

HIV and Cancer in Africa

The mission of the Bristol-Myers Squibb Foundation is to promote health equity and improve the health outcomes of populations disproportionately affected by serious diseases

Bridging Cancer Care - US 2017 Strategy and Program Focus

PROGRAM GOAL

- Advance strategies for engaging those at highest risk for or diagnosed with lung cancer in care and support programs – including interventions throughout the care continuum (from prevention to survivorship to palliative care), with the goal of improving the quality of life, health outcomes and health equity for those most disproportionately affected.

TARGET POPULATION

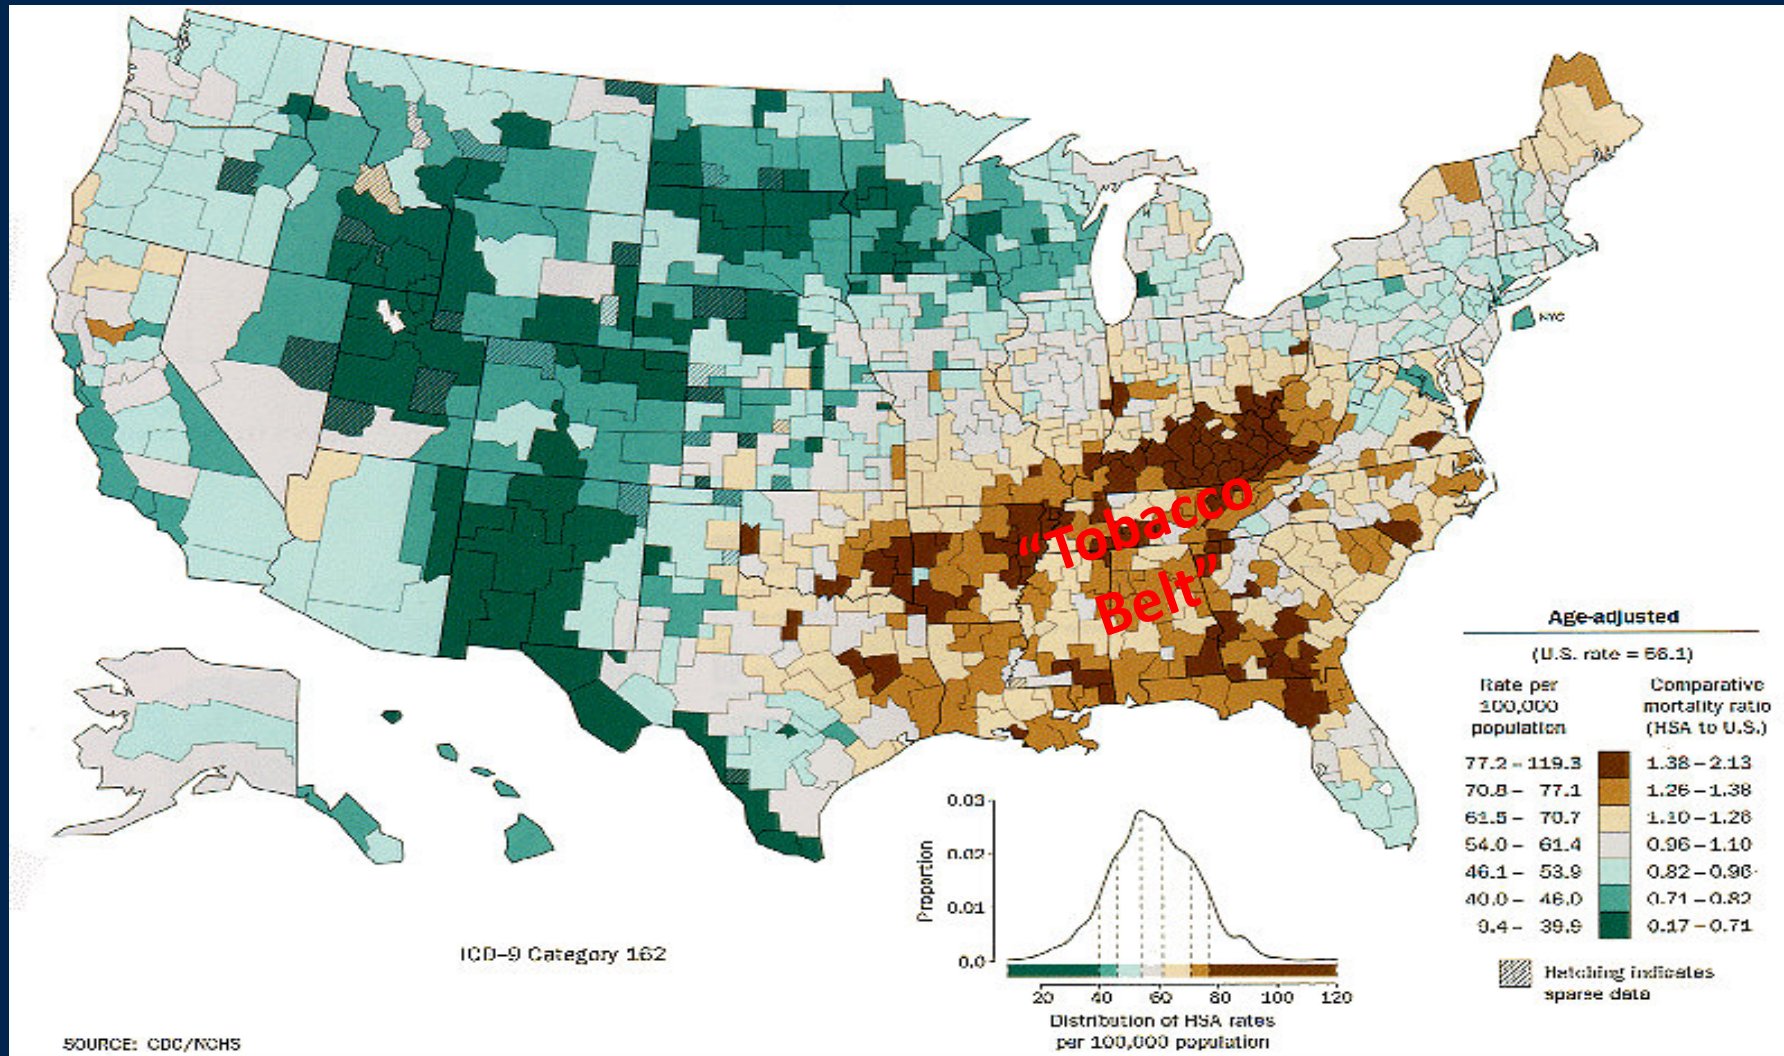

- Patients at highest risk for or diagnosed with lung cancer

TARGET GEOGRAPHY

- Expanding to be a national program in 2017

Background

Distribution of Lung Cancer in the US

2016 Survivorship RFP

Filling the Gap

- ASCO 2016 Gap in lung cancer survivorship care support identified
- Created RFP for lung cancer survivorship projects in response
- RFP disseminated and grantees selected
- Projects entering second year of implementation with promising results
- Lessons learned/outcomes:
 - PAF/ACS/WVU partnership to submit joint proposal for technical assistance with Center for Health Care Innovation at Harvard Law School
 - Video communication with West Virginian population represented are important to get message across

Care across the Continuum - Survivorship

Organization	Project	Care Continuum
<p>The University of South Carolina College of Nursing's</p>	<p>Establish a statewide collaboration between cancer advocates and academic institutions to test the feasibility and preliminary effects of a Mindfulness-based Stress Reduction (MBSR) intervention called Breathe Easier.</p>	<p>Survivorship</p>
<p>The West Virginia University Cancer Institute</p>	<p>Establishment of a monthly, interdisciplinary survivorship care clinics; Enhances the current surveillance system for recurrence of the primary and/or secondary cancer(s); Monitors and manages physical, psychosocial effects of diagnosis, treatment, and after effects;</p>	<p>Survivorship</p>
<p>The Mississippi Public Health Institute</p>	<p>Patient centered community care model that will leverage nurse navigators, social workers, and community health workers for improving development of and adherence to survivorship care plans for lung cancer survivors in the Mississippi Delta region.</p>	<p>Survivorship</p>
<p>The American Cancer Society</p>	<p>Develop, implement and evaluate an innovative approach to survivorship care that includes both telephone based and in-hospital lung cancer survivorship navigation; a self-management smart phone app developed in partnership with NCI, across 8 southeast states.</p>	<p>Survivorship</p>

2017 Grants & Giving – Newly Funded

Organization	Project	Care Continuum
VA-Partnership to Increase Access to Lung Screening (VA-PALS)	Pilot with at 10 VAMC's to bring evidence based protocol, lung nodule tracking system, and training, mapping protocols and tools and map on to VA EMR	Prevention, early detection and screening
A Breath of Hope Lung Foundation – An Animated Patient's Guide to Lung Cancer	Interactive web-based tool addressing the need for low literacy patient and family education.	Disease awareness and education
American Lung Association	Project to provide support to HUD as implementation of new smoke-free housing Policy implemented at Public Housing Associations in 10 states.	Linking lung cancer patients to case management
University of Louisville	Development of LEADS National Center for Primary Care who's goal is to establish an education and training center to improve lung cancer care across the continuum of disease.	Prevention, early detection and screening
National Minority Quality Forum	Technical Assistance/training for Quality Improvement of implementation of LC screening in KY.	Prevention, early detection and screening
LUNGevery	Development of novel process/tools for follow-up screening engagement for screening sites.	Prevention, early detection and screening

Care across the Continuum – Funded Portfolio

Organization	Project	Care Continuum
University of Kentucky, University of Louisville and the Lung Cancer Alliance;	KY-LEADS Collaborative effort to promote lung cancer survivorship and improve patient outcomes through education, prevention, and survivorship care.	Prevention, early detection and screening
Levine Cancer Institute	A pioneer project deploying a mobile CT scanning unit into communities to deliver care regardless of where a patient resides.	Prevention, early detection and screening
The American Cancer Society	Partnership with three federally qualified health centers (FQHCs) to develop, implement and evaluate a lung cancer screening navigation program to increase lung cancer screening rates within primary care systems and timely access to specialists.	Prevention, early detection and screening
Georgia Cancer Center at Augusta University	Utilizing healthcare workers in faith-based settings to provide lung cancer education and screening referrals for African American populations.	Disease awareness and patient education
Patient Advocate Foundation	A program in West Virginia to increase awareness about lung cancer screening and facilitate access to care for Medicaid eligible lung cancer patients by linking them to case management support.	Linking lung cancer patients to case management
Lung Cancer Alliance	Establish a national network of lung cancer specific support groups.	Enhancing psychosocial support

Bristol-Myers Squibb Foundation – Portfolio Outcomes

As of September 2017, 10 Projects in the BMSF Portfolio have:

- Reached approximately 110,389 vulnerable patients
- Developed 48 new curricula/tools in the lung cancer space
- Facilitated 169 partnership that have contributed to projects
- Three projects have resulted in permanent changes in health systems/public health policies:
 - ACS - Links of care, process mapping, quality improvement initiatives, workflow improvements and the implementation of evidence based practices in use in FQHC's
 - KY Leads – KY health system added LC screening to EMR
 - C-care - Permanent tobacco free campus implementation, at 9 of the 13 enrolled sites.
