**NOTE 1:** Because of the very low self-reported prevalence of ALS in this population, graphical summaries are not included.

**NOTE 2:** In order to enroll in the C8 Health Project, potential participants needed to travel to one of the established community-based screening sites. It was beyond the scope of the C8 Health Project to recruit and screen participants living in group residential facilities, such as nursing homes. Therefore, as participants in the C8 Health Project did not include those individuals more at risk for having ALS (those living in nursing homes), the self-reported prevalence of ALS may be lower than expected in a population of this size.
